AB The present invention provides a system and a method for the production of microparticles and nanoparticles of materials that can be dissolved. The system and method of the present invention provide quicker freezing times, which in turn produces a more uniform distribution of particle sizes, smaller particles, particles with increased porosity and a more intimate mixing of the particle components. The system and method of the present invention also produce particles with greater surface area than conventional methods. One form of the present invention provides a method for the preparation of particles. An effective ingredient is mixed with water, one or more solvents, or a combination thereof, and the resulting mixture is sprayed through an insulating nozzle located at or below the level of a cryogenic liquid. The spray generates frozen particles.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB This invention provides concentrated inflammation modifiers obtained from various plant, animal, and mineral sources, and methods for the preparation of such concentrated inflammation modifiers. Also provided are methods of preventing and treating inflammation using the concentrated inflammation modifiers. The invention also provides methods of treating inflammation of the skin and mucosal membranes by

administering compositions that contain concentrated inflammation modifiers as active ingredients. The methods are useful for treating inflammatory diseases, as well as for reducing or eliminating inflammation that results from transdermal delivery of a drug, or from cosmetics and skin care products. The concentrated inflammation modifiers and methods are also useful for enhancing wound healing and skin aging.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

CR 2002-129731 [17]

AB WO 200145731 A UPAB: 20021105

NOVELTY - Method for making a drug-containing particulate product comprises: (a) contacting a drug-containing feed solution (comprising the drug in a **cosolvent** system of at least 2 organic solvents) with a compressed **anti-solvent** fluid to precipitate drug-containing particles; and (b) separating the drug-containing particles from the **anti-solvent** fluid.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for:

(1) a particulate product for pulmonary delivery of a drug comprising a powder batch of particles including at least 1 drug. The powder batch has a tap density of 0.1-0.5 g/cm³ and is aerosolizable by an inhaler to give an aerosol having dispersed drug particles of mass median aerodynamic diameter of less than 6 microns in a carrier gas;

(2) a method for generating an aerosol for pulmonary delivery of a drug by aerosolizing drug-containing particles;

(3) a particulate product comprising a multicomponent material including a drug and a biocompatible polymer and having a degree of drug encapsulation of at least 30%. The particulate product is aerosolizable by an inhaler to give an aerosol having dispersed drug particles of mass median aerodynamic diameter of less than 6 microns; and

(4) an apparatus for generating a drug-containing aerosol for pulmonary delivery, comprising an inhaler containing particulate material, the inhaler being able to aerosolize the particles to give a drug-containing aerosol.

ACTIVITY - Antidiabetic.

MECHANISM OF ACTION - None given.

USE - Drug-containing particles (especially containing **insulin**) are useful for aerosolizing in an inhaler, for treating diabetic patients.
